

CARDIOLOGY

The chance of surviving
heart disease
is no longer left to chance.

Heart disease is the leading killer in the United States.

The disease is inherently complex, as are the specialized medical facilities where cardiac patients seek diagnosis, treatment and education. Effective and efficient cardiac centers integrate advanced diagnostic and interventional technology into the patient care model. Cogdell Spencer ERDMAN understands the unique requirements of cardiology care and delivers comforting facilities that focus on the patient. Our clients' cardiology facilities require careful blending of multiple specialties that are operationally efficient, while easing stress and improving medical outcomes.

Our healing environments are designed to have a positive impact on cardiac patients and their communities.

We design/construct cardiac facilities with all stakeholders in mind, promoting the efficient flow of services, staff satisfaction, regulatory compliance and optimum return on investment.

In the highly competitive market for cardiovascular providers, our facilities assist our clients in recruiting and retaining the highest caliber professionals.

Our healing environments are designed to accommodate the spatial needs of integrated cardiovascular programs.

The streamlined approach at Cogdell Spencer ERDMAN helps our clients successfully deliver world class cardiac care.

We have specialized expertise to integrate advanced technology into the healing environment while creating a welcoming and efficient space for patients, physicians and staff. We are widely recognized for our expertise in planning, delivering, developing and managing spaces that enhance comfort and healing for cardiac patients and their families.
